

FirstNet Equipment and Solutions

For over a month, police, fire, EMS, public health and emergency management personnel have been working around the clock to assess and mitigate the spread of COVID-19 nationwide. At this time, connectivity is vital to efficiently and effectively coordinate and communicate their emergency response.

Devices

Here is how we can help:

Five Star Technology Group proudly partners with multiple vendors and solution providers across the industry delivering you an available inventory of new and refurbished wireless devices including **Tablets, MiFi's, Air-Cards, Routers and Smartphones** as well as accessories to secure and protect your equipment.

Security and Device Management

More than ever, the demands on first responders and law enforcement agencies call for secure access to information and solutions to organize their connected environment. Therefore, we provide FirstNet Users with a safe mobile experience as well as mobility services to manage & protect mobile devices through solutions that accommodate their needs.

AccessMyLan provides a unified management platform for smartphones, tablets and cellular routers that delivers a safe Internet experience for FirstNet primary and extended primary users wherever they are.

MDM keeps your data protected and ensures complete control over confidential information. MDMs can remotely track, lock and wipe all data. By doing this, you enable a secure environment for devices and sensitive data.

Fleet Management and IoT

Due to the vast experience that we have in deploying Fleet Management Services, IoT and Control Center, Five Star Technology Group can help to assemble integrated fleet management solutions that will increase efficiency and safety for first responders and public safety fleets.
